PUBLIC RECORD — PART 6

Andrew Mountbatten-Windsor — Kenes Rakishev — Oxus / Tavia SPAC Structures

Analytical Briefing on the Documented Network and the Unresolved Discrepancy

Wednesday 20 May 2026 — Public Record Series — Part 6

1. The Central Question

What, if anything, did Kenes Rakishev provide to Andrew Mountbatten-Windsor of material value?

Andrew Mountbatten-Windsor has held no salaried public role since 2011 and withdrew from official duties in 2019. His visible income does not readily account for his financial position or access. The gap between declared income and observed financial reality remains unresolved.

On 19 February 2026 Andrew Mountbatten-Windsor was arrested on suspicion of misconduct in public office during his tenure as UK Special Representative for International Trade and Investment. The arrest was reported by BBC News at 10:50 BST on 19 February 2026. The investigation is live.

This briefing isolates one evidential route into the central question: Rakishev's ability to generate and deploy capital through US-regulated SPAC structures, and Andrew's documented relationship with him.

2. Established Points of Contact

Two facts are grounded in documentary evidence.

Andrew engaged directly with Rakishev in April 2011 via private email, facilitating access to senior Kazakh officials and referring to a consortium as “we.” The email was published in full by the Daily Mail on 20 May 2016 (NZ-L-03, NZ-L-03a). Buckingham Palace initially claimed forgery, then instructed Harbottle & Lewis to block publication on privacy grounds. Both positions failed.

Separately, Andrew benefited from the 2007 Sunninghill transaction, in which Timur Kulibayev — son-in-law of former Kazakh President Nazarbayev — acquired the property at a £3 million premium above the asking price.

These establish that Andrew's relationship with the Kazakh network involved both access and financial benefit.

3. Rakishev: Capital Access and Function

Rakishev operates as a financial intermediary within a network linked to senior Kazakh political figures. His significance lies in his ability to convert that position into structured capital access.

This capability is demonstrated through SPAC vehicles providing entry into the U.S. capital markets.

4. Oxus and Tavia Capital Structure

Rakishev launched two SPACs:

- Oxus Acquisition Corp — $150 million IPO; Business Combination closed 7 February 2024
- Tavia Acquisition Corp — preliminary registration filed 7 March 2024 ($175 million IPO)

Together, Oxus and Tavia represent approximately $325 million in structured access to U.S. capital markets.

Founder shares are typically acquired at nominal cost and become valuable upon completion of a business combination.

SEC filings confirm that equivalent founder shareholdings carried an indicative value of approximately $565,000 per director as at 16 January 2024.

5. The February 2024 Discrepancy

The following sequence is derived from primary sources:

- 5 January 2024 — SEC Registration Statement Form S-4 Amendment No. 4 signed by Karim Zahmoul as Director (Registration No. 333-273967)
- 11 January 2024 — SEC Registration Statement Form S-4 Amendment No. 5 signed by Karim Zahmoul as Director
- 16 January 2024 — Definitive Proxy Statement and Prospectus filed; founder share value confirmed at approximately $565,000
- 2 February 2024 — Oxus Extraordinary General Meeting; shareholders approve the Business Combination Proposal (SEC Form 8-K, 5 February 2024)
- 7–8 February 2024 — Business Combination consummated; performance condition met; Founder Shares vest; Nasdaq trading begins under ticker BRLS
- 19 February 2024 — the same shares declared under oath in the English High Court (BV20D01752) as having a value of $0

The discrepancy was identified during the trial and formally raised before the Court on 7 March 2024 by way of D-11 Application Notice. The Application Notice was lodged at the Family Division but was never sealed and never determined.

No explanation reconciling the SEC filings with the sworn evidence has been placed on the public record. No judicial determination has been made on the discrepancy.

A judicial review — AC-2025-LON-004293 — was filed in November 2025 to examine the administrative handling of these matters. Permission was refused as Totally Without Merit on 11 March 2026 (Mrs Justice Collins Rice). Renewed permission was refused on the papers on 7 May 2026 (Mr Justice Goose). The order of 7 May 2026 closed the final domestic judicial review route. Neither order addressed the documentary discrepancy between the SEC filings and the sworn evidence.

On 19 May 2026 the documentary contradiction was formally placed on the public record (Part 5 of this serialised public record) and a formal request for recording and assessment of the perjury allegation was made to the Commissioner of the Metropolitan Police Service under the Home Office Counting Rules, the National Crime Recording Standard, the CPS Judicial Comments guidance and the College of Policing Code of Ethics. The 14-day response window stated in that request expires 2 June 2026.

6. Regulatory Structure and Risk

SPACs are vehicles associated with increased risk of money laundering. They allow sponsor capital — often originating from opaque structures — to enter regulated markets through a process that converts private holdings into publicly traded equity.

In February 2021, FINRA identified SPACs as presenting elevated anti-money laundering and financial crime risks. FINRA noted that some firms have been engaging in the formation and IPO of SPACs without written supervisory procedures requiring member firms to “independently conduct due diligence” of SPAC sponsors and address other fraud risks such as the target company’s financial condition and prospects.

No publicly available information documents the anti-money laundering due diligence conducted into the origin of the sponsor funds for Oxus or Tavia.

Under SEC Regulation S-K (17 CFR §229.103), issuers are required to disclose any ongoing criminal investigation involving a company director. Failure to comply may result in increased regulatory scrutiny, enforcement action, and, in serious cases, delisting.

In this context, any judicial finding concerning inaccurate financial disclosures by a director presents a direct regulatory risk. Such a finding would require assessment by company counsel and may trigger disclosure obligations.

The absence of a judicial determination — in circumstances where a documented discrepancy exists — leaves that regulatory risk unresolved.

The existence or absence of a judicial determination is not neutral but carries potential regulatory consequences.

6A. David Stern — The Epstein Connection

David Stern is a German national and founder of Asia Gateway Ltd, registered at 81 Fulham Road, London SW3 6RD. He became a director of Andrew Mountbatten-Windsor's Pitch@Palace business in 2016. His name appears in more than 7,000 documents in the US Department of Justice's Epstein files spanning 2008 to 2018. He resigned from Pitch@Palace weeks after Epstein's arrest in July 2019.

On 20 April 2010, Stern forwarded to Jeffrey Epstein a Bloomberg article reporting Andrew Mountbatten-Windsor's fourth official trade visit to Kazakhstan. The article documented Andrew's meeting with the head of Samruk-Kazyna — the sovereign wealth fund that subsequently transferred control of BTA Bank to Rakishev in 2014 — and Andrew's offer to organise meetings between British investors and Kazakh companies. This document is part of the US DOJ Epstein files — reference EFTA00760183 (NZ-L-04).

One year later — on 14 April 2011 — Andrew emailed Rakishev directly (NZ-L-03, NZ-L-03a). Stern is documented in the Epstein files as continuing to act as intermediary between Andrew and Epstein until at least February 2018 — eight years after Andrew stated publicly that he had cut contact with Epstein (NZ-L-04a, NZ-L-04b).

7. Relevance to Andrew Mountbatten-Windsor

The relevance is not direct ownership but structural proximity.

Andrew Mountbatten-Windsor is documented as having a direct working relationship with Rakishev. Rakishev controls vehicles capable of generating and deploying capital through U.S. financial markets.

The unresolved question is whether Andrew's relationship with Rakishev intersected with these mechanisms in any way that conferred value.

This briefing does not assert that it did. It establishes that the conditions for such value transfer existed.

8. Conclusion

Three points are established:

- Andrew Mountbatten-Windsor maintained a documented relationship with Kenes Rakishev within a network associated with cross-border financial flows.
- Rakishev has demonstrable capacity to access U.S. capital markets through Oxus and Tavia SPAC structures.
- A documented financial discrepancy arising from those structures remains unresolved.

The central question therefore remains:

What, if anything, did Rakishev provide to Andrew Mountbatten-Windsor of material value?
